**Designing a Market Basket for NAEP** National Research Council 2000-07-17 At the request of the U.S. Department of Education, the National Research Council (NRC) established the Committee on NAEP Reporting Practices to examine the feasibility and potential impact of district-level and market-basket reporting practices. As part of its charge, the committee sponsored a workshop in February 2000 to gather information on issues related to market-basket reporting for the National Assessment of Education Progress (NAEP). Designing a Market Basket for NAEP: Summary of a Workshop explores with various stakeholders their interest in and perceptions regarding the desirability, feasibility, and potential impact of market-basket reporting for the NAEP. The market-basket concept is based on the idea that a relatively limited set of items can represent some larger construct. The general idea of a NAEP market basket is based on an image of a collection of test questions representative of some larger content domain and an easily understood index to summarize performance on the items.

**Biotechnology Operations** Michael J. Roy 2011-06-27 Because of rapid developments in the biotechnology industry—and the wide range of disciplines that contribute to its collective growth—there is a heightened need to more carefully plan and fully integrate biotech development projects. Despite the wealth of operations experience and associated literature available, no single book has yet offered a comprehensive, practical guide to fundamentals. Filling the void, Biotechnology Operations: Principles and Practices reflects this integrative philosophy, serving as a practical guide for students, professionals, or anyone else with interests in the biotech industry. Although many books emphasize specific technical aspects of biotech, this is perhaps the first to integrate essential concepts of product development and scientific and management skills with the seven functional areas of biotechnology: Biomufacturing Clinical trials Nonclinical studies Project management Quality assurance Quality control Regulatory affairs A practical roadmap to optimizing biotechnology operations, this reference illustrates how to use specific product planning, design, and project management processes to seamlessly merge plans and efforts in the key functional areas. Applying lessons learned throughout the nascent history of biotech, author Michael Roy highlights developmental principles that could bring future products to market more safely and efficiently. Drawing from his experiences working in industry and teaching a graduate course at the University of Wisconsin, this hotly anticipated book clarifies basic methodologies and practices to help reduce risks and resolve problems as future technological discoveries are developed into tangible products.
