Personalizing the High School Experience for Each Student Joseph DiMartino 2008 Why is it that so many students see high school as a prison sentence to be endured rather than a time to learn and grow? According to DiMartino and Clark, many high school students feel invisible and isolated. They don't see the relevance of what they are being taught, and they don't see how their classes are preparing them for success as adults. This book offers a new vision for high schools--a vision that puts students at the center of their learning. Personalized high schools engage students by allowing them to plan and develop their own pathways through school based on their talents, interests, and aspirations. The book describes six promising practices that are emerging in high schools: * Guided Personalized Learning. Teachers act as advisors to small groups of students over two to six years to review personal learning plans, assist in course selection, and discover opportunities in the community. * Personal Learning Plans. Students meet regularly with parents, advisors, mentors, and peers to review progress and plan next steps. * Personalized Teaching. Teachers differentiate instruction to allow students to explore different aspects of the subject and produce authentic work that shows their understanding. * Community-Based Learning. Active involvement in the community helps clarify a student's purpose and defines the steps necessary to achieve successful adult roles. * Personalized Assessment. Rather than grades and tests scores, the work itself--portfolios, exhibitions, and student-led conferences--shows what the students have learned. * Personalizing school systems. Some schools are moving past the Carnegie unit and focusing instead on helping each student achieve specified competencies, often through learning experiences that the students themselves have helped design. These six practices can improve learning for all students by engaging them in shaping their own high school experience and discovering how the academic skills they learn in school can have meaning in the world they will negotiate as adults.

Collaborative Networks for a Sustainable World Luis M. Camarinha-Matos 2010-09-21 Collaborative Networks for a Sustainable World Aiming to reach a sustainable world calls for a wider collaboration among multiple stakeholders from different origins, as the changes needed for sustainability exceed the capacity and capability of any individual actor. In recent years there has been a growing awareness both in the political sphere and in civil society including the bu- ness sectors, on the importance of sustainability. Therefore, this is an important and timely research issue, not only in terms of systems design but also as an effort to b- row and integrate contributions from different disciplines when designing and/or g- erning those systems. The discipline of collaborative networks especially, which has already emerged in many application sectors, shall play a key role in the implemen- tion of effective sustainability strategies. PRO-VE 2010 focused on sharing knowledge and experiences as well as identi- ing directions for further research and development in this area. The conference - dressed models, infrastructures, support tools, and governance principles developed for collaborative networks,

as important resources to support multi-stakeholder s- tainable developments. Furthermore, the challenges of this theme open new research directions for CNs. PRO-VE 2010 held in St.

Patent Markets in the Global Knowledge Economy Thierry Madiès 2014-03-20 The development of patent markets should allow for better circulation of knowledge and more efficient allocation of technologies at a global level. However, the beneficial role of patents has recently come under scrutiny by those favouring 'open' innovation, and important questions have been asked, namely: How can we estimate the value of patents? How do we ensure matching between supply and demand for such specific goods? Can these markets be competitive? Can we create a financial market for intellectual property rights? In this edited book, a team of authors addresses these key questions to bring readers up to date with current debates about the role of patents in a global economy. They draw on recent developments in economic analysis but also ground the discussion with the basics of patent and knowledge economics. Striking a balance between institutional analysis, theory and empirical evidence, the book will appeal to a broad readership of academics, students and practitioners.
