Our resource demonstrates why cells are the building blocks of life. Start your breakdown by first identifying what a cell is. Then, compare single-celled and multicellular organisms. Introduce the concept of DNA before exploring the different parts of a cell. From there, take a look at the jobs of these parts. Move on to cell reproduction by exploring mitosis and meiosis. Dissect plant and animal cells to see how they work and how they are similar. Look at the big picture by seeing how cells become organisms. Finally, learn how particles move through cell membranes with diffusion and osmosis. Aligned to the Next Generation Science Standards and written to Bloom's Taxonomy and

Study Guide and Workbook, an Interactive Approach for Starr and McMillan's

Human Biology, Third Edition Jane B. Taylor 1999 Asks the student to write all answers in this study guide/workbook. This workbook is interactive because it requires students to do things instead of just read more material. All questions are arranged by chapter modules so students may skip unassigned material. Each module in the study guide refers to the page numbers of the corresponding module in the text. There is a wide variety of questions: multiple-choice questions; tables to be filled in; art to be labeled; true/false questions requiring students to write the correct answer if the statement is false; thought-provoking conceptual questions; boldfaced terms requiring a written definition; list of objectives in fill-in-the-blank format; and other types of questions.
