statistical and quantitative methods pedagogy, is useful for novice and seasoned instructors at both undergraduate and graduate levels, inspiring them to use transformative approaches to train students as future researchers. Is it time for a radical revision in our pedagogical orientation? How are we currently teaching introductory statistics and quantitative methods, and how should we teach them? What innovations are used, what is in development? This groundbreaking edited volume addresses these questions and more, providing cutting-edge guidance from highly accomplished teachers. Many current textbooks and syllabi differ in only superficial ways from those used 50 years ago, yet the field of quantitative methods—and its relationship to the research enterprise—has expanded in many important ways. A philosophical axiom underlying this book is that introductory teaching should prepare students to potentially enter more advanced

quantitative methods training and ultimately to become accomplished researchers. The reader is introduced to classroom innovation, and to both pragmatic and philosophical challenges to the status quo, motivating a broad revolution in how introductory statistics and quantitative methods are taught. Designed to update and renovate statistical pedagogy, this material will stimulate students, new instructors, and experienced teachers.

**How To Read And Critique A Scientific Research Article: Notes To Guide Students Reading Primary Literature (With Teaching Tips For Faculty Members)** Foong May

Yeong 2014-01-16 Given the explosion of information and

knowledge in the field of Life Sciences, adapting primary literature as materials in course work as part of active learning seems to be more effective in improving scientific literacy among science undergraduates than the pure transmission of content knowledge using traditional textbooks. In addition, students also read research articles as part of undertaking laboratory research projects useful for preparing them for graduate school. As such, a good grasp of reading and analytical skills is needed for students to understand how their research project contributes to the field that they are working in. Such skills are being taught at UK and USA universities. In Asia, this approach in teaching has not yet been as widespread, although similar ideas are beginning to be used in education. Written as a quick guide for undergraduate students and faculty members dealing with scientific research articles as part of a module or research project, this book will be useful, especially in Asia, for

students and faculty members as the universities look to incorporating the use of scientific research articles in their undergraduate teaching. For Life Science students, the first time they encounter a primary literature can be rather daunting, though with proper guidance, they can overcome the initial difficulties and become confident in dealing with scientific articles. This guidebook provides a structured approach to reading a research article, guiding the reader step-by-step through each section, with tips on how to look out for key points and how to evaluate each section. Overall, by helping undergraduate students to overcome their anxieties in reading scientific literature, the book will enable the students to appreciate better the process of scientific investigations and how knowledge is derived in science.

**Social Work Research and Evaluation** Richard M. Grinnell 2008 This book is the longest standing and most widely adopted text in the field of social work research and evaluation. As stated in the book's preface, it is intended for advanced undergraduate and beginning graduate social work students in a one-semester research methods course. Since the first edition in 1981, this edition is designed to provide social work students with the basic methodological foundation they need in order to successfully complete more advanced research courses that focus on single-system designs

or program evaluations. With its customarily straightforward user-friendly writing style by renowned educators, this edition will continue to maintain its notoriety as the premier social work research methods text. Thoroughly revised and updated, the chapters offer a wealth of new research examples and references, accessible diagrams of essential concepts and processes, and extended coverage of core social work research methods and recent developments. For example, with the inclusion of four new chapters on the evidence-based approach to social work practice, the book emphasizes how important this approach has become, and provides a rock-solid foundation for understanding how to evaluate and interpret research findings that have been derived from research studies-the minimal skills needed for evidence-based social work practitioners.

work in teaching and learning in universities, this book will be indispensable reading for those who would like to carry out action research on their own practice. Lin S Norton's concept of 'pedagogical action research' has come from over twenty years' experience of carrying out such research, and more than six years of encouraging colleagues to carry out small scale studies at an institutional, national and international level. This accessible text illustrates what might be done to improve teaching/supporting learning by carrying out action research to address such questions such as: What can I do to enthuse my students? What can I do to help students become more analytical? How can I help students to link theory with their practice? What can I do to make my lecturing style more accessible? What is going wrong in my seminars when my students don't speak? Action Research for Teaching and Learning offers readers practical advice on how to research their own practice in a higher education context. It has

been written specifically to take the reader through each stage of the action research process with the ultimate goal of producing a research study which is publishable. Cognisant of the sector's view on what is perceived to be 'mainstream research', the author has also written a substantial theoretical section which justifies the place of pedagogical action research in relation to reflective practice and the scholarship of teaching and learning.
