given as a reward for hard work, or to reinforce the topic just studied. For restless children who need to stretch their legs and let off steam before they knuckle down to further work, the games presented in this book provide the perfect solution. Several of the vocabulary games are designed to help ESL students to practise their new words, and all the games encourage children to listen, concentrate and stay focused on the topic of study. The activities are aimed at children between the ages of 7 and 13 years. Grammar lessons and vocabulary building will never be boring when children are offered the games in this book.

Instructional Models in Computer-Based Learning Environments Sanne Dijkstra 2013-11-11 In the last decade there have been rapid developments in the field of computer-based learning environments. A whole new generation of computer-based learning environments has appeared, requiring new approaches to design and development. One main feature of current systems is that they distinguish different knowledge bases that are assumed to be necessary to support learning processes. Current computer-based learning environments often require explicit representations of large bodies of knowledge, including knowledge of instruction. This book focuses on instructional models as explicit, potentially implementable representations of knowledge concerning one or more aspects of instruction. The book has three parts, relating to different aspects of the knowledge that should be made explicit in instructional models: knowledge of

instructional planning, knowledge of instructional strategies, and knowledge of instructional control. The book is based on a NATO Advanced Research Workshop held at the University of Twente, The Netherlands in July 1991.

A Construct Validation Study of Implicit and Time Sensitive Vocabulary Measures Bronson Hui 2021

Vocabulary researchers have started expanding their assessment toolbox by incorporating timed tasks and psycholinguistic instruments (e.g., priming tasks) to gain insights into lexical development (e.g., Elgort, 2011; Godfroid, 2020b; Nakata & Elgort, 2020; Vandenberghe et al., 2021). These timed sensitive and implicit word measures differ qualitatively from traditional paper- or accuracy-based vocabulary tests and are believed to tap into lexical strength and representations in the mental lexicon (Elgort, 2018; Godfroid, 2020b). As a result, there have been calls to use both traditional (explicit) and these timed and implicit word measures in a complementary manner (e.g., Godfroid, 2020b; Nakata & Elgort, 2020;

Vandenberghe et al., 2021). At the same time, researchers must first develop a thorough understanding of how these different types of measures (explicit vs. implicit and timed vs. untimed) relate to each other before they can make informed decisions on their measurement battery. It is thus well-motivated to examine the construct validity of these measures empirically and systematically. In this validation study, I took the first step to fill this research gap by assessing both the predictive and factorial structure validity of these measures. One hundred and forty-five learners of English took part in five vocabulary tasks: (1) a receptive form-meaning task, where they chose an option representing the meaning of the target word embedded in a sentence, (2) a productive form-meaning task, where they produced the target word to fit a sentence context, (3) a computerized Yes-No (reaction time) test, where they indicated if

they knew the target word by pressing keys on their keyboard, (4) a masked repetition priming task with lexical decisions, where they judged if a letter string forms a word in English, and (5) a semantic priming task with lexical decisions. Items in all five tests were the same 40 English words sampled across the 2K - 5K frequency bands. Data analysis involved item inspection and extraction of person-related parameters based on Rasch and/or mixed-effects models. The measures of person ability obtained from individual tasks were then submitted to confirmatory factor analyses in order to assess the psychometric dimensionality of the measure battery. The resulting latent factor(s), representing a pure measure of vocabulary under a specific conceptualization, was then used to predict self-reported proficiency to shed light on their predictive validity. With method effects accounted for, the one-factor solution ("Vocabulary

solution-vocabulary

Knowledge") produces a good fit and is preferred based on the principle of parsimony for both the implicit vs. explicit and timed vs. untimed distinctions. This result provides evidence for psychometric unidimensionality of these measures as representing a potential unitary construct of vocabulary knowledge. At the same time, the vocabulary construct has the most explanatory power (predictive validity) when conceptualized distinctly as lexical knowledge (measured untimed tasks) and strength (measured by timed tasks). Taken together, these results foreground the need for researchers to further specify the nature of the vocabulary construct as well as the operational task features with which it can be assessed empirically. Importantly, I call for more measurement validation work as researchers expand their assessment toolboxes in vocabulary research.

Patterns-Based Engineering Lee Ackerman

2010-06-29 Successfully delivering Solutions via Patterns In Patterns-Based Engineering , two leading experts bring together true best practices

for developing and deploying successful software-intensive systems. Drawing on their extensive enterprise development experience, the authors clearly show how to deliver on the promise of a patterns-based approach—and consistently create higher-quality solutions faster, with fewer resources. Lee Ackerman and Celso Gonzalez demonstrate how Patterns-Based Engineering (PBE) can help you systematically overcome common obstacles to success with patterns. By bringing discipline and clarity to patterns usage, their techniques enable you to replicate your success broadly and scale patterns to even the largest projects. The authors introduce powerful ways to discover, design, create, package, and consume patterns based on your organization's experience and best practices. They also present extensive coverage of the nontechnical aspects of making patterns work, including a full chapter of

Building Information Modeling Nawari O. Nawari 2015-04-21 BIM for Structural Engineering and Architecture Building Information Modeling: Framework for Structural Design outlines one of the most promising new developments in architecture, engineering, and construction (AEC). Building information modeling (BIM) is an

information management and analysis technology that is changing the role of computation in the architectural and engineering industries. The innovative process constructs a database assembling all of the objects needed to build a specific structure. Instead of using a computer to produce a series of drawings that together describe the building, BIM creates a single illustration representing the building as a whole. This book highlights the BIM technology and explains how it is redefining the structural analysis and design of building structures. BIM as a Framework Enabler This book introduces a new framework—the structure and architecture synergy framework (SAS framework)—that helps develop and enhance the understanding of the fundamental principles of architectural analysis using BIM tools. Based upon three main components: the structural melody, structural poetry, and structural analysis, along with the BIM

tools as the frame enabler, this new framework allows users to explore structural design as an art while also factoring in the principles of engineering. The framework stresses the influence structure can play in form generation and in defining spatial order and composition. By highlighting the interplay between architecture and structure, the book emphasizes the conceptual behaviors of structural systems and their aesthetic implications and enables readers to thoroughly understand the art and science of whole structural system concepts. Presents the use of BIM technology as part of a design process or framework that can lead to a more comprehensive, intelligent, and integrated building design Places special emphasis on the application of BIM technology for exploring the intimate relationship between structural engineering and architectural design Includes a discussion of current and emerging

solution-vocabulary

trends in structural engineering practice and the role of the structural engineer in building design using new BIM technologies Building Information Modeling: Framework for Structural Design provides a thorough understanding of architectural structures and introduces a new framework that revolutionizes the way building structures are designed and constructed.

multimedia features. Moreover, we will describe the current state-of-the-art in the implementation of CLIL (using Spain as an example) and afterwards we will discuss the benefits that this digital tool provides in a CLIL context. Nowadays, teachers are worried because they devote too much time to the teaching of CLIL vocabulary and not to the application of those words in social tasks, which are a way of consolidating knowledge and key competences at the same time. With Vocabulary Notebook, we will show how this problem can be tackled in a very successful way. Vocabulary Notebook is currently being used for educational purposes in more than 127 countries by more than 17,000 individuals, as well as several educational institutions around the globe. Student Writing Lucy K. Spence 2014-04-01

Education professionals interested in understanding student writing will want to read this book. It describes "Generous Reading," a novel method of approaching the writing of culturally and linguistically diverse students. This book addresses

the increasing diversity present throughout schools across the U.S. and in other countries. Drawing from current research and theory in linguistics and composition, Spence has developed a way for teachers to tap into the cultural worlds of students and draw upon their linguistic understandings in order to help them improve their writing. The book is based on research projects conducted in the southwest and southeast regions of the United States. The chapters on language variation, culturally relevant instruction, and language transfer will also be of interest to writing teachers. Spence has presented the Generous Reading method across the nation and internationally where audiences have been eager to try out the methods in their classrooms with students of all ages. University professors have used Generous Reading in teacher education courses. This methodology has potential to change teachers' perspectives on student

writing and illuminate writing strengths previously overlooked.
